FILE - LINNEMAN
RIVER BASIN

DATE: March 1, 1971
MEMO TO: Bureau of Water Pollution Control Attn: J. Fornaris
FROM: J. Roger Crawford - Ohio Basin Unit
SUBJECT: Urbana - Salt Fork Pollution

KLB

On March 1, 1971, the writer surveyed a section of the Salt Fork Creek which borders the Urbana Landfill Site, in response to a pollution complaint that was registered at the Champaign office by Mr. Jim Smith. The complaint noted that a solvent odor was emitted from the water which discharged from a drainage tile. The tile was spotted by Mr. Smith while on a canoeing trip down the stream. The tile is abutted by a headwall structure at the stream edge and the tile is located on the south bank of the stream at a point which is approximately north-northwest of the landfill maintenance building. The writer sampled the subject tile effluent and the results of the laboratory analysis are attached. The reported solvent odor was also sensed by the writer. The discharge flow rate was approximately 1 - 2 gallons per minute at the time of the visit. A letter concerning this discharge is to be sent to the City of Urbana since the drainage tile is thought to be under the city's jurisdiction.
